

Customer Feedback For Jim's FRE™

“**Jim's FRE** has been a key factor in keeping Dove sound and injection free. I have not had to inject her since we started feeding the ABC regimen. Before, like most barrel racers, I was injecting hocks and feet almost every 6-8 months. Dove is 16 this year, and I have noticed that if she doesn't receive her **Jim's FRE**, she will get stiff and start showing some signs of arthritis and lameness from the original feet issues. I am religious about **Jim's FRE**. If we haul somewhere and she is going to be standing on concrete, I will give extra **Jim's FRE**. This has also allowed me to not have to pack her feet, or use soft ride boots to protect her from soreness of hard surfaces. Dove is actually barefoot, which is something I was told would be impossible to do, due to the angle of her palmar angles. I have also been able to completely eliminate bute, banamine, and previcox from my med box. I do not give any pain medications what so ever.”

- Ashley

“Thank goodness for **Jim's FRE**! I only used it for a couple days with the horse I actually purchased it for, but we had an interesting few days here. At the end of last week, we had a crazy storm come through with a lot of high winds and hail. When the hail front came rolling in and hit the metal roof, it spooked the horses and two of them hit their heads **HARD** on the barn. I immediately gave them **Jim's FRE** and called the vet who was concerned about brain injury in one and broken bones in the other. It was 14 hours before they could be seen by the vet, and if you know anything about brain injury, the first 12-24 hours are crucial. We were able to keep the inflammation under control until the vet could administer a brain-specific anti-inflammatory, and there were no broken bones! They are both sore but recovering well thanks to your wonderful product! Thank you!”

One customer's observations after 4 days giving Jim's FRE:

“It's only been 4 days since I started Jack on the **FRE**, but I think I'm starting to see changes. Hind leg pastern joints and up the lower legs look and feel 'tighter.' They used to be a little puffy, not bad swelling but puffy. Also he cantered up for his breakfast today. I'm going to try to trim hooves today. It will be interesting to see if he can stand better.”

After 3 weeks:

“I think it has helped quite a bit. Chronic inflammation/puffiness in lower hind legs is gone. He is moving better, too. The lumpy, hard groin muscles are a bit better, too ... I am pretty sure it really is what helped because I stopped using the liniment just to isolate the impact of the **FRE** ... I forgot to mention I worked on his feet twice this past week, and it was not much of an ordeal. I did need to stop and come back to it, but nowhere near as frustrating.”

Jim's FRE™

Natural Inflammatory Relief Supplement For All Classes of Horses

Jim's FRE™ is appropriate for use in horses with leg, joint, tendon, and ligament injuries, and ongoing soundness issues.

Directions: Feed 1 ounce (30 ml) two times per day for the first 7 days. Thereafter, feed 1/2 ounce two times daily until symptoms subside.

Jim's FRE™ - 1 Gallon Bottle - Item no. A340

Jim's FRE™ - 16 oz. Bottle - Item no. A341
